

Insulation sleeve for suspension cables and track supports

Practical, reliable protection for suspension cables and track supports

The insulation sleeve offers electric shock protection to prevent electrical arcing caused by birds or similar. It is NOT a high-voltage insulation for reducing the required electrical distance!

Cost-effective

The insulating sleeve can be used to protect existing current-carrying suspension cables or live track supports at low cost. The sleeve is only installed selectively on problematic sections.

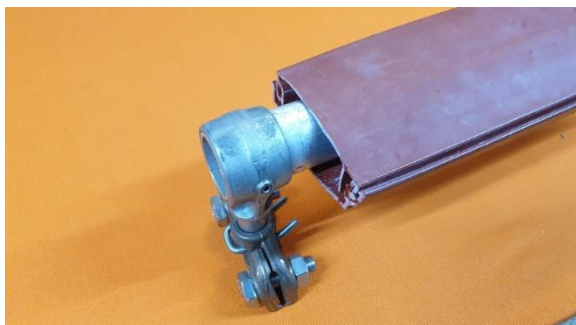

Wide range of applications

Up to $\varnothing$ 18mm (approx. 185 mm²): Art. no. 618260.100 up to 25kV.
Up to $\varnothing$ 38mm (approx. 400 mm²): Art. no. 618260.200 up to 25kV.

High-voltage resistant material

The high dielectric strength of the UV-stable material is characterized by high tracking and weather resistance. The molecularly cross-linked protective coating results in an extremely robust insulation system that ensures reliable use under the toughest operating conditions for many years.

The insulation sleeve can be installed without tools.
